EDAR Monoclonal Antibody (Clone AT19E8)

单克隆抗体

产品货号: MA01227

第三版

免疫原: Recombinant human EDAR (27-448aa) purified from E.coli.

亚型: IgG2a, k

克隆: Anti-human EDAR mAb, clone AT19E8, is derived from hybridization of mouse F0 myeloma cells with spleen cells from BALB/c mice immunized with a recombinant human EDAR protein.

描述: Tumor necrosis factor receptor superfamily member EDAR is a protein that in humans is encoded by the EDAR gene. EDAR and other genes provide instructions for making proteins that work together during embryonic development. These proteins form part of a signaling pathway that is critical for the interaction between two cell layers, the ectoderm and the mesoderm. In the early embryo, these cell layers form the basis for many of the body's organs and tissues. Ectoderm-mesoderm interactions are essential for the proper formation of several structures that arise from the ectoderm, including the skin, hair, nails, teeth, and sweat glands.

配方: Liquid. In Phosphate-Buffered Saline (pH 7.4) with 0.02% Sodium Azide, 10% Glycerol.

浓度: 1 mg/mL

保存: +4 °C 保存 (1-2 周). 长期保存在 -20 °C 或者 -70 °C. 避免反复冻融.

应用: ELISA, WB, ICC/IF
