Anti-Human HLA-G Monoclonal Antibody

单克隆抗体

产品货号: MA02486

第三版

免疫原:Fusion protein of HLA-G

亚型:IgG2b

克隆:1E5A10

描述:Human major histocompatibility complex (MHC) antigens,also referred to as human leukocyte antigens (HLA),are encoded by genes located on the short arm of chromosome 6 (6p21.3). HLA-G is a non-classical MHC class I molecule with multiple immunoregulatory properties. HLA-G exhibits a restricted pattern of expression that includes placental extravillous trophoblasts at the maternal-fetal interface,where it abolishes maternal immune cell activity against fetus and establishes immune tolerance. Aberrant expression of HLA-G has been found in a variety of human neoplastic diseases. It plays an important role in the escape of tumor cells from immunosurveillance.

配方:

浓度:None

保存: +4 ° C 保存 (1-2 周). 长期保存在-20 ° C或者-70 ° C. 避免反复冻融.

应用:ELISA, WB, ICC/IF
