**描述:**Mucosa-associated lymphoid tissue lymphoma translocation protein 1 belongs to caspase-like protein superfamily.MALT1 plays a potential role in the regulation of apoptosis and induces NF $\kappa$ B activation and required for the normal development of B cells and for the activation of the IKK complex.It acts as a caspase and mediates additional functions related to T cell activation,cleaving both the ubiquitin editing enzyme,TNFAIP3,and the C terminus of BCL10 .It has two isoforms.Researches showed that inhibition of MALT1 blocks A20 and BCL10 cleavage, reduces NF $\kappa$ B activity,and decreases the expression of NF $\kappa$ B targets BCLXL.
