产品货号: TP01999

第三版

别名:Eukaryotic translation initiation factor 4E, CBP, EIF4E1, EIF4EL1, EIF4F

描述:EIF4E, a member of eukaryotic initiation factor 4 families, modulates translation of maternal mRNAs in early embryos before the onset of zygotic transcription. This protein recognizes and binds to the 7 methyl GTP cap structure of eukaryotic mRNAs, thereby mediating the initiation of translation. It facilitates ribosome binding by inducing the unwinding of the mRNAs secondary structures. Recombinant human EIF4E protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography.
