**Description:** This gene encodes an enzyme that belongs to the tyrosine protein kinase family. A similar protein in rat binds to Rho family GTPase 2 (Rnd2) and regulates neurite outgrowth via activation of Ras homolog gene family, member A (RhoA). PRAG1 (PEAK1 Related Kinase Activating Pseudokinase 1) is a Protein Coding gene. An important paralog of this gene is PEAK1.

**Antigen:** Synthesized peptide derived from human Pragmin around the phosphorylation site of Y413.
