

Anti-Human CDCA2 Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA05733

3th Edition

Description: This gene encodes a targeting subunit of the cell-cycle associated protein, protein phosphatase 1, with a role in targeting this protein to chromatin during anaphase. These two proteins comprise a phosphatase complex that is involved in nuclear envelope reformation and regulation of the DNA damage response. The encoded protein may also play a role in cancer progression. Alternative splicing results in multiple transcript variants. CDCA2 (Cell Division Cycle Associated 2) is a Protein Coding gene. Among its related pathways are DNA Damage.

Antigen: Synthesized peptide derived from the Internal region of human Repo-Man

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity: Ubiquitously expressed.
