

Anti-Human/Mouse GABPB2 Polyclonal Antibody

Polyclonal Antibody

Cat.NO.: PA12075

3th Edition

Description: GA-binding protein subunit beta-2 is a protein that in humans is encoded by the GABPB2 gene. The GABPB variant containing a C-terminal leucine zipper motif, which they called GABP-beta, can homodimerize and form a transcriptionally active heterotetrameric complex with GABPA. The variant lacking this motif, which they called GABP-gamma, can form heterodimers but cannot form transcriptionally active heterotetramers with GABPA.

Antigen: Recombinant protein of human GABPB2

Form:

How to use: 1.0 ml distilled water will be added to the product

Stability: Lyophilized product, 5 years at 2 – 8°C; Solution, 2 years at –20°C

Dilution: PBS (pH7.4) containing 1% BSA

Application: This antibody can be used for western blotting in concentration of 1?5?g/ml.

Specificity:
