

**CD3G, 23-116aa, Human, His tag, E.coli**

**Cat.NO.: TP01510**

3th Edition

**Synonyms:**CD3g molecule, gamma (CD3-TCR complex), CD3-GAMMA, T3G

**Description:**The protein encoded by this gene is the CD3-gamma polypeptide, which together with CD3-epsilon, -delta and -zeta, and the T-cell receptor alpha/beta and gamma/delta heterodimers, forms the T-cell receptor-CD3 complex. This complex plays an important role in coupling antigen recognition to several intracellular signal-transduction pathways. The genes encoding the epsilon, gamma and delta polypeptides are located in the same cluster on chromosome 11. Defects in this gene are associated with T cell immunodeficiency. Recombinant human CD3G protein, fused to His-tag at N-terminus, was expressed in E.coli.
