

CMC4, 1-68 aa

Cat.NO.: TP01656

3th Edition

Synonyms:C6,1B, MTCP1, MTCP1B, MTCP1NB, p8, p8MTCP1

Description:CMC4 was identified by involvement in some t(X;14) translocations associated with mature T-cell proliferations. This region has a complex gene structure, with a common promoter and 5' exon spliced to two different sets of 3' exons that encode two different proteins. This gene represents the downstream 8 kDa protein that localizes to mitochondria. Recombinant human CMC4 protein, fused to His-tag at N-terminus, was expressed in E.coli and purified by using conventional chromatography techniques.
