HTATIP2 Antibody (Clone AT5D6)

单克隆抗体

产品货号: MA01426

第三版

免疫原: Recombinant human HTATIP2 (1-242aa) purified from E. coli

亚型: IgG2a, k

克隆: Anti-human HTATIP2 mAb, clone AT5D6, is derived from hybridization of mouse F0 myeloma cells with spleen cells from BALB/c mice immunized with a recombinant human HTATIP2 protein.

描述: HTATIP2, also known as TIP30, is a member of the short-chain dehydrogenases/reductases (SDR) family. It acts as a tumor suppressor participating in metabolic suppression, inhibition of angiogenesis and induces the expression of apoptosis related genes Bad and Siva. HTATIP2 interacts with the activation domain of HIV-1 TAT and enhances its transcription by phosphorylating RNA polymerase II (Pol II). Defects in This protein are associated with hepatocellular carcinomas and apoptotic resistant tumor cells, suggesting a potential use for HTATIP2 in antitumor therapy.
