KLF7 Antibody (Clone AT3G3)

单克隆抗体

产品货号: MA01464

第三版

免疫原: Recombinant human KLF7 (1-302aa) purified from E. coli

亚型: IgG1, k

克隆: Anti-human KLF7 mAb, clone AT3G3, is derived from hybridization of mouse F0 myeloma cells with spleen cells from BALB/c mice immunized with a recombinant human KLF7 protein.

描述: KLF7 is a member of the Kruppel-like transcriptional regulator family. Members in this family regulate cell proliferation, differentiation, survival and the development of nervous systems and contain three C2H2 zinc fingers at the C-terminus that mediate binding to GC-rich sites. KLF7 binds specifically to an Ikaros core binding element that is crucial for in vivo NTRK1/TrkA enhancer function. This protein may contribute to the progression of type 2 diabetes by inhibiting insulin expression and secretion in pancreatic beta-cells and by deregulating adipocytokine secretion in adipocytes. A pseudogene of this gene is located on the long arm of chromosome 3. Alternative splicing results in multiple transcript variants.
