PSMD10 Antibody (Clone AT1F4)

单克隆抗体

产品货号: MA01508

第三版

免疫原: Recombinant human PSMD10 (1-226aa) purified from E. coli

亚型: Mouse IgG1, k

克隆: Anti-human PSMD10 mAb, clone AT1F8, is derived from hybridization of mouse F0 myeloma cells with spleen cells from BALB/c mice immunized with a recombinant human PSMD10 protein.

描述: 26S proteasome non-ATPase regulatory subunit 10 is an enzyme that in humans is a multicatalytic proteinase complex with a highly ordered structure composed of 2 complexes, a 20S core and a 19S regulator. Proteasomes are distributed throughout eukaryotic cells at a high concentration and cleave peptides in an ATP/ubiquitin-dependent process in a non-lysosomal pathway. An essential function of a modified proteasome, the immunoproteasome, is the processing of class I MHC peptides.
