Anti-Human/Mouse/Rat Di-Methyl-Histone H3 (Lys36) Monoclonal Antibody

单克隆抗体

产品货号: MA01815

第三版

免疫原:Synthetic Peptide

亚型:IgG

克隆:6L2

描述:Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.
