Anti-Human FGG Monoclonal Antibody

单克隆抗体

产品货号: MA01970

第三版

免疫原:Fusion protein of Fibrinogen gamma chain

亚型:IgM

克隆:456

描述:Fibrinogen is a soluble plasma glycoprotein synthesized in the liver. It is composed of two sets of three structurally different subunits: alpha (FGA),beta (FGB),gamma (FGG). Fibrinogen is converted by thrombin into fibrin during blood coagulation. Fibrinogen and fibrin play overlapping roles in blood clotting,fibrinolysis,cellular and matrix interactions,the inflammatory response,wound healing,and neoplasia . FGG is the gamma chain of fibrinogen. Mutations in the gene of FGG lead to several disorders,including dysfibrinogenemia,hypofibrinogenemia and thrombophilia.

配方:

浓度:None

保存: +4 ° C 保存 (1-2 周). 长期保存在-20 ° C或者-70 ° C. 避免反复冻融.

应用:ELISA, WB, ICC/IF
