Anti-Human/Mouse/Rat HSPA1L Monoclonal Antibody

单克隆抗体

产品货号: MA02233

第三版

免疫原:Fusion protein of HSP70

亚型:IgG1

克隆:34

**描述:**HSPA1A ,collectively known as HSP70 (also referred to HSP72),is a stress-inducible member of heat-shock protein 70 (HSP70) proteins which are highly conserved chaperons implicated in protein folding,protein refolding,protein transport,and protein targeting. Encoded by two closely linked,intronless and stress-inducible genes,HSPA1A and HSPA1B differ by only two amino acids and are believed to be fully interchangeable proteins. HSPA1A is a cytosoluclear protein able to translocate between cytoplasm and nucleus. Generally,HSPA1A is thought to be expressed in unstressed normal cells at low or undetectable levels. Expression of HSPA1A protein can be highly activated by various stressful stimuli. Significant up-regulation of HSPA1A has been found in various tumors. Recently it has been reported that HSPA1A can be constitutively expressed in selected cell types. HSP70 is also used as exosomal marker. This antibody well recognized the endogenous HSP70 protein in multiple cell lines. (21373891)

**配方:**

浓度:None

保存: +4 ° C 保存 (1-2 周). 长期保存在-20 ° C或者-70 ° C. 避免反复冻融.

应用:ELISA, WB, ICC/IF
