Anti-Human/Mouse/Rat Mono-Methyl-Histone H3 (Lys37) Polyclonal Antibody

多克隆抗体

产品货号: PA02199

第三版

描述:Core component of nucleosome. Nucleosomes wrap and compact DNA into chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post-translational modifications of histones, also called histone code, and nucleosome remodeling.

抗原:Synthesized peptide derived from human Histone H3 around the mono-methylation site of K37.

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:Specifically expressed in the seminiferous tubules of testis
