Anti-Human/Mouse/Rat FGF16 Polyclonal Antibody

多克隆抗体

产品货号: PA02493

第三版

描述:The protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. The rat homolog is predominantly expressed in embryonic brown adipose tissue and has significant mitogenic activity, which suggests a role in proliferation of embryonic brown adipose tissue.

抗原:Synthesized peptide derived from the Internal region of human FGF-16.
