Anti-Human KLK1 Polyclonal Antibody

多克隆抗体

产品货号: PA02505

第三版

描述: Kallikreins are a subgroup of serine proteases having diverse physiological functions. Growing evidence suggests that many kallikreins are implicated in carcinogenesis and some have potential as novel cancer and other disease biomarkers. This gene is one of the fifteen kallikrein subfamily members located in a cluster on chromosome 19. This protein is functionally conserved in its capacity to release the vasoactive peptide, Lys-bradykinin, from low molecular weight kininogen.

抗原: Synthesized peptide derived from the Internal region of human KLK1.
