Anti-Human CD83 Polyclonal Antibody

多克隆抗体

产品货号: PA02595

第三版

描述: The protein encoded by this gene is a single-pass type I membrane protein and member of the immunoglobulin superfamily of receptors. The encoded protein may be involved in the regulation of antigen presentation. A soluble form of this protein can bind to dendritic cells and inhibit their maturation. Three transcript variants encoding different isoforms have been found for this gene. CD83 (CD83 Molecule) is a Protein Coding gene. Diseases associated with CD83 include Exanthema Subitum and Specific Bursitis Often Of Occupational Origin. Among its related pathways are T cell receptor signaling pathway and B Cell Development Pathways.
