Anti-Human IL36B Polyclonal Antibody

多克隆抗体

产品货号: PA02639

第三版

描述:The protein encoded by this gene is a member of the interleukin 1 cytokine family. Protein structure modeling indicated that this cytokine may contain a 12-stranded beta-trefoil structure that is conserved between IL1A (IL-A alpha) and IL1B (IL-1 beta). This gene and eight other interleukin 1 family genes form a cytokine gene cluster on chromosome 2. Two alternatively spliced transcript variants encoding distinct isoforms have been reported. IL36B (Interleukin 36, Beta) is a Protein Coding gene. Among its related pathways are Innate Immune System and Toll-Like receptor Signaling Pathways. GO annotations related to this gene include cytokine activity and interleukin-1 receptor binding. An important paralog of this gene is IL36A.

抗原:Synthesized peptide derived from the C-terminal region of human IL-1F8.
