Anti-Human/Mouse/Rat ADCY4 Polyclonal Antibody

多克隆抗体

产品货号: PA02899

第三版

描述:This gene encodes a member of the family of adenylate cyclases, which are membrane-associated enzymes that catalyze the formation of the secondary messenger cyclic adenosine monophosphate (cAMP). Mouse studies show that adenylate cyclase 4, along with adenylate cyclases 2 and 3, is expressed in olfactory cilia, suggesting that several different adenylate cyclases may couple to olfactory receptors and that there may be multiple receptor-mediated mechanisms for the generation of cAMP signals. Alternative splicing results in transcript variants.

抗原:Synthesized peptide derived from the Internal region of human A Cyclase IV

配方:

如何使用:加1ml超纯水重溶

稳定性: -20°C保存条件下,冻干粉,保质期为五年;液体,保质期为两年。

稀释液:PBS (pH7.4) , 1% BSA

应用:WB1~5 μ g/ml.

特异性:Detected in the zona glomerulosa and the zona fasciculata in the adrenal gland (at protein level).

1/1
