描述:ADCY5 (Adenylate Cyclase 5) is a Protein Coding gene. Diseases associated with ADCY5 include Dyskinesia, Familial, With Facial Myokymia and Chorea, Hereditary Benign. Among its related pathways are Signaling in Gap Junctions and Development Endothelin-1/EDNRA signaling. GO annotations related to this gene include protein heterodimerization activity and phosphorus-oxygen lyase activity. An important paralog of this gene is ADCY6. ADCY6 (Adenylate Cyclase 6) is a Protein Coding gene. Diseases associated with ADCY6 include Lethal Congenital Contracture Syndrome 8 and Hypomyelination Neuropathy-Arthrogyposis Syndrome. Among its related pathways are Signaling in Gap Junctions and Development Endothelin-1/EDNRA signaling. GO annotations related to this gene include protein kinase binding and adenylate cyclase activity. An important paralog of this gene is ADCY5.
