Anti-Human/Mouse/Rat ANXA2 Polyclonal Antibody

多克隆抗体

产品货号: PA03285

第三版

描述:This gene encodes a member of the annexin family. Members of this calcium-dependent phospholipid-binding protein family play a role in the regulation of cellular growth and in signal transduction pathways. This protein functions as an autocrine factor which heightens osteoclast formation and bone resorption. This gene has three pseudogenes located on chromosomes 4, 9 and 10, respectively. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene.

抗原:Synthesized peptide derived from the Internal region of human Annexin II.
