Anti-Human CD296 Polyclonal Antibody

多克隆抗体

产品货号: PA03989

第三版

描述:ADP-ribosyltransferase catalyzes the ADP-ribosylation of arginine residues in proteins. Mono-ADP-ribosylation is a posttranslational modification of proteins that is interfered with by a variety of bacterial toxins including cholera, pertussis, and heat-labile enterotoxins of E. coli. The amino acid sequence consists of predominantly hydrophobic N- and C-terminal regions, which is characteristic of glycosylphosphatidylinositol (GPI)-anchored proteins. This gene was previously designated ART2. ART1 (ADP-Ribosyltransferase 1) is a Protein Coding gene. Among its related pathways are Defensins and Innate Immune System. GO annotations related to this gene include NAD+ ADP-ribosyltransferase activity and NAD(P)+-protein-arginine ADP-ribosyltransferase activity. An important paralog of this gene is ART5.

抗原:Synthesized peptide derived from the Internal region of human CD296.

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:
