Anti-Human/Mouse/Rat Phospho-BCL-x (Thr47) Polyclonal Antibody

多克隆抗体

产品货号: PA04063

第三版

描述:BCL2L1 is a member of the BCL-2 protein family. BCL2L1 is expressed as two distinct isoforms, Bcl-xL and Bcl-xS, and is located at the outer mitochondrial membrane. The Bcl-XL isoform is a 233 amino acid protein, acting as an apoptotic inhibitor. Bcl-XL can form heterodimers with BAX, BAK or BCL2, and the heterodimerization with BAX does not seem to be required for anti-apoptotic activity. The Bcl-XS isoform is a shorter variant that is 178 amino acids in length and lacks a 63 amino acid region (amino acids 126-188), acting as an apoptotic activator. This antibody can recognize Bcl-XL, Bcl-XS and Bcl-X(Beta).

抗原:Synthesized peptide derived from human Bcl-x around the phosphorylation site of T47.
