Anti-Human/Mouse/Rat Acetyl-GATA2/3 (Lys336/304) Polyclonal Antibody

多克隆抗体

产品货号: PA04462

第三版

描述:GATA2 (GATA Binding Protein 2) is a Protein Coding gene. Diseases associated with GATA2 include Immunodeficiency 21 and Emberger Syndrome. Among its related pathways are Embryonic and Induced Pluripotent Stem Cell Differentiation Pathways and Lineage-specific Markers and Sudden Infant Death Syndrome (SIDS) Susceptibility Pathways. GO annotations related to this gene include transcription factor activity, sequence-specific DNA binding and chromatin binding. An important paralog of this gene is GATA3. This gene encodes a member of the GATA family of zinc-finger transcription factors that are named for the consensus nucleotide sequence they bind in the promoter regions of target genes. The encoded protein plays an essential role in regulating transcription of genes involved in the development and proliferation of hematopoietic and endocrine cell lineages. Alternative splicing results in multiple transcript variants.

抗原:Synthetic peptide from human protein

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:GATA2 is Endothelial cells.GATA3 is T-cells and endothelial cells.
