Anti-Human/Mouse/Rat KCNC2 Polyclonal Antibody

多克隆抗体

产品货号: PA04705

描述:The Shaker gene family of Drosophila encodes components of voltage-gated potassium channels and is comprised of four subfamilies. Based on sequence similarity, this gene is similar to one of these subfamilies, namely the Shaw subfamily. The protein encoded by this gene belongs to the delayed rectifier class of channel proteins and is an integral membrane protein that mediates the voltage-dependent potassium ion permeability of excitable membranes. Several transcript variants encoding different isoforms have been found for this gene.

抗原:Synthesized peptide derived from the C-terminal region of human KV3.2
