Anti-Human/Mouse/Rat RXRG Polyclonal Antibody

多克隆抗体

产品货号: PA05059

第三版

描述: This gene encodes a member of the retinoid X receptor (RXR) family of nuclear receptors which are involved in mediating the antiproliferative effects of retinoic acid (RA). This receptor forms dimers with the retinoic acid, thyroid hormone, and vitamin D receptors, increasing both DNA binding and transcriptional function on their respective response elements. This gene is expressed at significantly lower levels in non-small cell lung cancer cells. Alternatively spliced transcript variants have been described. RXRG (Retinoid X Receptor Gamma) is a Protein Coding gene. Diseases associated with RXRG include Hyperlipidemia, Familial Combined and Lung Cancer. Among its related pathways are Glioma and Transcriptional misregulation in cancer. GO annotations related to this gene include transcription factor activity, sequence-specific DNA binding and RNA polymerase II regulatory region sequence-specific DNA binding. An important paralog of this gene is RXRA.

抗原: Synthesized peptide derived from human LWS

配方:

如何使用: 加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液: PBS (pH7.4) ， 1% BSA

应用: WB 1 ~ 5 μ g/ml.

特异性:
