多克隆抗体

产品货号: PA05287

第三版

**描述:** This gene encodes an F-box-containing protein that is a component of an SCF-type E3 ubiquitin ligase complex that regulates the onset of cell division. The G2/M transition in the cell cycle requires the interaction of the proteins cyclin B1 and cyclin-dependent kinase 1. The activated ubiquitin ligase complex targets the protein cyclin B1 for degradation, preventing this transition to mitosis. ZC3HC1 (Zinc Finger C3HC-Type Containing 1) is a Protein Coding gene. Among its related pathways are Apoptosis and Autophagy and DNA Damage. GO annotations related to this gene include protein kinase binding.

**抗原:** Synthesized peptide derived from human NIPA around the non-phosphorylation site of S354.
