Anti-Human NKX2-6 Polyclonal Antibody

多克隆抗体

产品货号: PA05291

第三版

描述: This gene encodes a homeobox-containing protein that belongs to the NK-2 homeobox family. This protein is a vertebrate homolog of Drosophila homeobox-containing protein called 'tinman', which has been shown to be essential for development of the heart-like dorsal vessel. In conjunction with related gene, NKX2-5, this gene may play a role in both pharyngeal and cardiac embryonic development. Mutations in this gene are associated with persistent truncus arteriosus. NKX2-6 (NK2 Homeobox 6) is a Protein Coding gene. Diseases associated with NKX2-6 include Conotruncal Heart Malformations and Tricuspid Valve Disease. GO annotations related to this gene include transcription factor activity, sequence-specific DNA binding and sequence-specific DNA binding. An important paralog of this gene is NKX2-3.
