多克隆抗体

产品货号: PA05477

第三版

描述:The protein encoded by this gene belongs to the family of G-protein coupled receptors, that are preferentially activated by adenosine and uridine nucleotides. This gene is moderately expressed in undifferentiated HL60 cells, and is located on both chromosomes X and Y. P2RY8 (Purinergic Receptor P2Y8) is a Protein Coding gene. Among its related pathways are Peptide ligand-binding receptors. GO annotations related to this gene include G-protein coupled receptor activity and G-protein coupled purinergic nucleotide receptor activity. An important paralog of this gene is F2RL1.

抗原:Synthesized peptide derived from the Internal region of human P2RY8
