Anti-Human/Mouse/Rat P38 Polyclonal Antibody

多克隆抗体

产品货号: PA05483

第三版

**描述:** Responds to activation by environmental stress, pro-inflammatory cytokines and lipopolysaccharide (LPS) by phosphorylating a number of transcription factors, such as ELK1 and ATF2 and several downstream kinases, such as MAPKAPK2 and MAPKAPK5. Plays a critical role in the production of some cytokines, for example IL-6. May play a role in stabilization of EPO mRNA during hypoxic stress. Isoform Mxi2 activation is stimulated by mitogens and oxidative stress and only poorly phosphorylates ELK1 and ATF2. Isoform Exip may play a role in the early onset of apoptosis.

**抗原:** Synthesized peptide derived from human p38 around the non-phosphorylation site of Thr180/Tyr182.
