Anti-Human PAX1 Polyclonal Antibody

多克隆抗体

产品货号: PA05518

第三版

描述: This gene is a member of the paired box (PAX) family of transcription factors. Members of the PAX family typically contain a paired box domain and a paired-type homeodomain. These genes play critical roles during fetal development. This gene plays a role in pattern formation during embryogenesis and may be essential for development of the vertebral column. This gene is silenced by methylation in ovarian and cervical cancers and may be a tumor suppressor gene. Mutations in this gene are also associated with vertebral malformations

抗原: Synthesized peptide derived from the Internal region of human Pax-1.
