Anti-Human CLNS1A Polyclonal Antibody

多克隆抗体

产品货号: PA05582

第三版

描述: This gene encodes a protein that functions in multiple regulatory pathways. The encoded protein complexes with numerous cytosolic proteins and performs diverse functions including regulation of small nuclear ribonucleoprotein biosynthesis, platelet activation and cytoskeletal organization. The protein is also found associated with the plasma membrane where it functions as a chloride current regulator. Pseudogenes of this gene are found on chromosomes 1, 4 and 6. Several transcript variants encoding different isoforms have been found for this gene. CLNS1A (Chloride Nucleotide-Sensitive Channel 1A) is a Protein Coding gene. Among its related pathways are Activation of cAMP-Dependent PKA and Gene Expression. GO annotations related to this gene include poly(A) RNA binding and protein heterodimerization activity.

抗原: Synthesized peptide derived from the C-terminal region of human pICln

配方:

如何使用: 加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液: PBS (pH7.4) ， 1% BSA

应用: WB 1 ~ 5 μg/ml.

特异性:
