Anti-Human PIGX Polyclonal Antibody

多克隆抗体

产品货号: PA05585

第三版

**描述:** This gene encodes a type I transmembrane protein in the endoplasmic reticulum (ER). The protein is an essential component of glycosylphosphatidylinositol-mannosyltransferase I, which transfers the first of the four mannoses in the GPI-anchor precursors during GPI-anchor biosynthesis. Studies in rat indicate that the protein is translated from a non-AUG translation initiation site. Alternative splicing results in multiple transcript variants. PIGX (Phosphatidylinositol Glycan Anchor Biosynthesis Class X) is a Protein Coding gene. Among its related pathways are Glycosylphosphatidylinositol (GPI)-anchor biosynthesis and Post-translational modification- synthesis of GPI-anchored proteins.

**抗原:** Synthesized peptide derived from the C-terminal region of human PIG-X

**配方:**

**如何使用:** 加1ml超纯水重溶

**稳定性:** -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

**稀释液:** PBS (pH7.4) ， 1% BSA

**应用:** WB 1 ~ 5 μg/ml.

**特异性:**
