Anti-Human MOK Polyclonal Antibody

多克隆抗体

产品货号: PA05705

第三版

描述: This gene belongs to the MAP kinase superfamily. The gene was found to be regulated by caudal type transcription factor 2 (Cdx2) protein. The encoded protein, which is localized to epithelial cells in the intestinal crypt, may play a role in growth arrest and differentiation of cells of upper crypt and lower villus regions. Multiple alternatively spliced transcript variants encoding different isoforms have been observed for this gene.

抗原: Synthesized peptide derived from the Internal region of human MOK

配方:
