Anti-Human/Mouse/Rat TMC8 Polyclonal Antibody

多克隆抗体

产品货号: PA06037

第三版

描述:Epidermodysplasia verruciformis (EV) is an autosomal recessive dermatosis characterized by abnormal susceptibility to human papillomaviruses (HPVs) and a high rate of progression to squamous cell carcinoma on sun-exposed skin. EV is caused by mutations in either of two adjacent genes located on chromosome 17q25.3. Both of these genes encode integral membrane proteins that localize to the endoplasmic reticulum and are predicted to form transmembrane channels. This gene encodes a transmembrane channel-like protein with 8 predicted transmembrane domains and 3 leucine zipper motifs. TMC8 (Transmembrane Channel Like 8) is a Protein Coding gene. Diseases associated with TMC8 include Epidermodysplasia Verruciformis and Superficial Mycosis. GO annotations related to this gene include receptor binding. An important paralog of this gene is TMC4.

抗原:Synthesized peptide derived from the C-terminal region of human TMC8

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:Expressed in placenta, prostate and testis.
