Anti-Human KCNK7 Polyclonal Antibody

多克隆抗体

产品货号: PA06077

第三版

描述: This gene encodes a member of the superfamily of potassium channel proteins containing two pore-forming P domains. The product of this gene has not been shown to be a functional channel; however, it may require other non-pore-forming proteins for activity. Multiple transcript variants encoding different isoforms have been found for this gene. KCNK7 (Potassium Two Pore Domain Channel Subfamily K Member 7) is a Protein Coding gene. Among its related pathways are Cardiac conduction and Neuropathic Pain-Signaling in Dorsal Horn Neurons. GO annotations related to this gene include potassium channel activity and potassium ion leak channel activity. An important paralog of this gene is KCNK1.
