Anti-Human/Mouse UBR1 Polyclonal Antibody

多克隆抗体

产品货号: PA06089

第三版

描述:The N-end rule pathway is one proteolytic pathway of the ubiquitin system. The recognition component of this pathway, encoded by this gene, binds to a destabilizing N-terminal residue of a substrate protein and participates in the formation of a substrate-linked multiubiquitin chain. This leads to the eventual degradation of the substrate protein. The protein described in this record has a RING-type zinc finger and a UBR-type zinc finger. Mutations in this gene have been associated with Johanson-Blizzard syndrome. UBR1 (Ubiquitin Protein Ligase E3 Component N-Recognin 1) is a Protein Coding gene. Diseases associated with UBR1 include Johanson-Blizzard Syndrome and Urethral Obstruction Sequence. Among its related pathways are Innate Immune System and Class I MHC mediated antigen processing and presentation. GO annotations related to this gene include ligase activity and leucine binding. An important paralog of this gene is UBR2.

抗原:Synthesized peptide derived from the Internal region of human Ubr1

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:Broadly expressed, with highest levels in skeletal muscle, kidney and pancreas. Present in acinar cells of the pancreas (at protein level).
