Anti-Human PLAGL1 Polyclonal Antibody

多克隆抗体

产品货号: PA06153

第三版

描述: This gene encodes a C2H2 zinc finger protein that functions as a suppressor of cell growth. This gene is often deleted or methylated and silenced in cancer cells. In addition, overexpression of this gene during fetal development is thought to be the causal factor for transient neonatal diabetes mellitus (TNDM). Alternative splicing and the use of alternative promoters results in multiple transcript variants encoding two different protein isoforms. The P1 downstream promoter of this gene is imprinted, with preferential expression from the paternal allele in many tissues. PLAGL1 (PLAG1 Like Zinc Finger 1) is a Protein Coding gene. Diseases associated with PLAGL1 include Diabetes Mellitus, Transient Neonatal, 1 and Paternal Uniparental Disomy Of Chromosome 6. Among its related pathways are Gene Expression and Aryl Hydrocarbon Receptor. GO annotations related to this gene include RNA polymerase II transcription factor activity, sequence-specific DNA binding and transcriptional activator activity, RNA polymerase II transcription regulatory region sequence-specific binding. An important paralog of this gene is PLAG1.

抗原: Synthesized peptide derived from the Internal region of human ZAC1

配方:

如何使用: 加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液: PBS (pH7.4) , 1% BSA

应用: WB 1 ~ 5 μg/ml.

特异性:
