Anti-Human/Mouse/Rat Neurofilament Polyclonal Antibody

多克隆抗体

产品货号: PA06254

第三版

描述:Neurofilaments are type IV intermediate filament heteropolymers composed of light, medium, and heavy chains. Neurofilaments comprise the axoskeleton and they functionally maintain the neuronal caliber. They may also play a role in intracellular transport to axons and dendrites. This gene encodes the light chain neurofilament protein. Mutations in this gene cause Charcot-Marie-Tooth disease types 1F (CMT1F) and 2E (CMT2E), disorders of the peripheral nervous system that are characterized by distinct neuropathies. A pseudogene has been identified on chromosome Y.

抗原:Synthesized peptide derived from the C-terminal region of human NF-L.

配方:
