Anti-Human CD32 Polyclonal Antibody

多克隆抗体

产品货号: PA06392

第三版

描述:The protein encoded by this gene is a low affinity receptor for the Fc region of immunoglobulin gamma complexes. The encoded protein is involved in the phagocytosis of immune complexes and in the regulation of antibody production by B-cells. Variations in this gene may increase susceptibility to systemic lupus erythematosus (SLE). Several transcript variants encoding different isoforms have been found for this gene.

抗原:Synthesized peptide derived from the Internal region of human CD32-B/C.
