Anti-Human CD267 Polyclonal Antibody

多克隆抗体

产品货号: PA06550

第三版

描述:The protein encoded by this gene is a lymphocyte-specific member of the tumor necrosis factor (TNF) receptor superfamily. It interacts with calcium-modulator and cyclophilin ligand (CAML). The protein induces activation of the transcription factors NFAT, AP1, and NF-kappa-B and plays a crucial role in humoral immunity by interacting with a TNF ligand. This gene is located within the Smith-Magenis syndrome region on chromosome 17. TNFRSF13B (TNF Receptor Superfamily Member 13B) is a Protein Coding gene. Diseases associated with TNFRSF13B include Immunodeficiency, Common Variable, 2 and Immunoglobulin A Deficiency 2. Among its related pathways are TRAF Pathway and RANK Signaling in Osteoclasts. GO annotations related to this gene include receptor activity.

抗原:Synthesized peptide derived from the Internal region of human CD267.

配方:

如何使用:加1ml超纯水重溶

稳定性: -20 ° C保存条件下，冻干粉,保质期为五年；液体，保质期为两年。

稀释液:PBS (pH7.4) ， 1% BSA

应用:WB 1 ~ 5 μ g/ml.

特异性:Highly expressed in spleen, thymus, small intestine and peripheral blood leukocytes. Expressed in resting B-cells and activated T-cells, but not in resting T-cells.
