Anti-Human/Mouse/Rat RERE Polyclonal Antibody

多克隆抗体

产品货号: PA07324

第三版

**描述:** This gene encodes a member of the atrophin family of arginine-glutamic acid (RE) dipeptide repeat-containing proteins. The encoded protein co-localizes with a transcription factor in the nucleus, and its overexpression triggers apoptosis. A similar protein in mouse associates with histone deacetylase and is thought to function as a transcriptional co-repressor during embryonic development. Multiple transcript variants encoding different isoforms have been found for this gene.

**抗原:** Synthetic peptide of human RERE

**配方:**
