Anti-Human/Mouse/Rat MET Polyclonal Antibody

多克隆抗体

产品货号: PA07326

第三版

描述:The proto-oncogene MET product is the hepatocyte growth factor receptor and encodes tyrosine-kinase activity. The primary single chain precursor protein is post-translationally cleaved to produce the alpha and beta subunits, which are disulfide linked to form the mature receptor. Various mutations in the MET gene are associated with papillary renal carcinoma. Two transcript variants encoding different isoforms have been found for this gene.

抗原:Synthetic peptide of human MET
