Anti-Human/Mouse USF1 Polyclonal Antibody

多克隆抗体

产品货号: PA07468

第三版

描述: This gene encodes a member of the basic helix-loop-helix leucine zipper family, and can function as a cellular transcription factor. The encoded protein can activate transcription through pyrimidine-rich initiator (Inr) elements and E-box motifs. This gene has been linked to familial combined hyperlipidemia (FCHL). Alternative splicing of this gene results in multiple transcript variants. A related pseudogene has been defined on chromosome 21.

抗原: Fusion protein of human USF1
