Anti-Human NOD2 Polyclonal Antibody

多克隆抗体

产品货号: PA09610

第三版

描述: This gene is a member of the Nod1/Apaf-1 family and encodes a protein with two caspase recruitment (CARD) domains and six leucine-rich repeats (LRRs). The protein is primarily expressed in the peripheral blood leukocytes. It plays a role in the immune response to intracellular bacterial lipopolysaccharides (LPS) by recognizing the muramyl dipeptide (MDP) derived from them and activating the NF κ B protein. Mutations in this gene have been associated with Crohn disease and Blau syndrome.

抗原: Synthetic peptide of human NOD2
