Anti-Human ABO Polyclonal Antibody

多克隆抗体

产品货号: PA09657

第三版

描述: This gene encodes proteins related to the first discovered blood group system, ABO. Which allele is present in an individual determines the blood group. The 'O' blood group is caused by a deletion of guanine-258 near the N-terminus of the protein which results in a frameshift and translation of an almost entirely different protein. Individuals with the A, B, and AB alleles express glycosyltransferase activities that convert the H antigen into the A or B antigen. Other minor alleles have been found for this gene.

抗原: Synthetic peptide of human ABO

配方:

如何使用: 加1ml超纯水重溶
