产品货号: TP02420

第三版

别名: Histone deacetylase 2, HD2, RPD3, YAF1

描述: HDAC2 belongs to the histone deacetylase family that act via the formation of large multiprotein complexes and are responsible for the deacetylation of lysine residues on the N-terminal region of the core histones. It forms transcriptional repressor complexes by associating with many different proteins, including YY1, a mammalian zinc-finger transcription factor.
