产品货号: TP02421

第三版

别名: Histone deacetylase 8, CDA07, HD8, HDACL1, RPD3.

描述: HDAC8, also known as histone deacetylase 8, belongs to class 1 of the histone deacetylase/acuc/alpha family. This protein is biologically involved in skull morphogenesis and metabolic control of the ERR-alpha/PGC1-alpha transcriptional complex. Histones play a critical role in transcriptional regulation, cell cycle progression, and developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription factor access to DNA.
